

Product Spotlight // RP235 / RP245 RIDER POLISHER

April Fri, 2020

Published In **Newsletters**

New from Allen Engineering in 2020 – the RP 235 and RP 245 Rider Polishers designed with the high-volume concrete polisher in mind. These riding trowels turned concrete polishers can achieve the necessary high rotor speeds and torque for polishing demanding concrete floors.

These Rider / Polishers also come equipped with special built-in dolly jacks that allow for the quick change of polishing pads throughout the job. The RP 235 (manual steering) and the RP 245 (power steering) are both built on our popular edging riding trowel platform that allows contractors to get extremely close to the walls, pipes, and other obstructions while polishing concrete.

These new Rider / Polishers were exhibited at the recent industry trade shows and received great response from our booth visitors. AEC is also launching a full line of diamond tools and chemicals to support concrete polishers using Allen Rider / Polishers for a one-stop-shop solution.

RP 235 and RP 245 standard features include:

- 180 RPM for high-speed burnishing or polishing
- 40 lb Propane Tank for longer-lasting operating hours
- 25 HP Kohler Propane Fueled Engine
- 7-gallon retardant tank to allow for more water application to the polishing process
