Jobsite Story - Allen Engineering Expansion

March Mon, 2017
Published In Newsletters

In an effort to accommodate Allen's growth over the last several years, our leadership recently decided to undergo an expansion to our factory in Paragould, AR. The expansion will add 34,000 square feet of warehouse and distribution space.

In January, Bowman Works out of Western Tennessee poured the slabs for this new expansion. The pour provided a unique opportunity for our employees to see the machines they build in action on an actual pour. To finish the slab, Bowman used a full line-up of Allen riders including an HDX600, HDX780, HDX760, HP205 and a MSP445.

Bowman did a fantastic job on the slab with an overall FF of 85+ and FL of 38+, giving us an excellent floor for the expansion that we are hoping to have finished by the close of the third quarter this year
