Our TRTP75 Triple Roller Tube Paver was the perfect match for the job in Mobile, AL at the Coca-Cola distribution center. The Allen Concrete Pavers TRTP75 is one of our newer models added to the Triple Roller Tube Paver group. This machine may appear to be smaller but rest assured that it is packed with power and economic value to get the job done.

The optional features of the spray system and steering leg allow for a smoother operation to keep concrete from sticking to the tube, as well as the ability to straighten the machine while paving.

Our TRTP75 is lightweight, making this the perfect machine for smaller pours that otherwise are too heavy for equipment such as the Allen Truss Screed. We were able to meet the weight limitations for this pour in Mobile.

A representative from TK Peavy & Sons remarks “It would have taken me twice the guys to do this any other way.”

Other features of the TRTP75 Triple Roller Tube Paver that make it the perfect piece of equipment for smaller paving projects include:

- **Easy to use Operator Controls**
- **Operator Platform**
- **Overhead bar truss frame**
- **Honda EFI Engine**

For more information on how you can get a TRTP75 on your next pour or other triple roller tube paving machines, contact us by calling 870.236.7751 or email us at equipmentsales@alleneng.com.
