Allen Engineering Introduces the All-New HDX705 Riding Trowel

Paragould, Arkansas USA- Allen Engineering is proud to highlight the HDX705, a standout addition to our 2025 lineup of high-performance, fully hydraulic riding trowels. Built for powerful performance and intelligent operation, the HDX705 is equipped with a robust Ford 2.5-liter gasoline engine and advanced integrated technology.

This new model is equipped with Allen's Intelli-Power telematics system, which ensures reliable communication between the engine and Bosch-Rexroth hydraulic components. This results in improved machine responsiveness, extended component life, and a smarter, more efficient operating experience. With an 84 hp engine, wide 117.6-inch panning path, and power steering system, the HDX705 is engineered to deliver exceptional results on even the most demanding jobsites.

Key Features and Specifications:

- Ford 2.5 Liter Engine
- 84 Horsepower class
- 145 RPMs
- Intelli-Power Telematics
