Product Spotlight: AW16-B

March Mon, 2021
Published In Newsletters

AEC launched the first fully electric battery-powered wheel buggy – the Allen AW16-B - and we are ready to share it with the world.

The Allen AW16-B fully electric battery-powered buggy has been uniquely designed and tested for jobsites and projects where engine emissions are a major concern. The wheel buggy is powered by a rugged Vanguard 48 Volt Lithium-Ion power pack capable of reaching 8-9 hour run times. With a limited-slip transaxle, the AW16-B is more mobile than your average wheel buggy and its Dynamic Electric Brake gives safety to the operator by not allowing the buggy to move unless the throttle is engaged. With all IP65 rated controls, the ability to pressure wash the unit after a hard day's work makes the AW16-B the most durable and versatile battery-powered buggy on the market.

For more information on the AW16-B and all of its features, check out the video linked below, contact our sales team by calling 870.236.7751, emailing sales@alleneng.com, or going to www.alleneng.com.
