

## Hydraulics Engineer

### Overview:

This role is responsible for supporting Allen Engineering's hydraulic products and systems. This position will interact with all departments within the organization. This position will develop into the SME (Subject Matter Expert) for all the company's hydraulics and hydraulic systems product requirements.

### Essential Duties and Responsibilities:

- Support, improve and be accountable for all aspects of hydraulic components and systems used at Allen Engineering. This includes the following:
  - Design and implementation of new products or product enhancements
  - Review of internal processes and recommendations for improvement
  - Support the initiatives around hydraulic components and systems for our current products, our planned new products in development and identified product enhancements related to Allen's product lines
  - Evaluate product hydraulic designs and functionality to make recommendations on product standardization and simplification
  - Provide technical support to in house users as well end-users as required.
  - Assist with creating videos for online support
  - Perform other duties as required or requested

### Qualifications:

- Bachelor of Science in Engineering or equivalent
- Experience with hydraulic components, processes, and systems a plus
- Exhibit good work ethic and communication skills, both verbal and written
- Exhibit attention to detail with respect to documentation and organizational skills
- Must be a team player with the ability to work independently

### Physical Requirements

- While performing the duties of this job, the employee is required to sit, drive, walk, lift, and move equipment as needed. The employee must have good hearing, vision, and physical abilities.
